## Save on Costs with the Integral V™ Solution

- Super Cost Effective
- High Load Capacity
- Over 20 Different Configurations!
- Ability to integrate with several other PBC products

**Rockford, IL – May 23, 2008** Pacific Bearing Company proudly introduces our new line of cost effective, easy to specify linear guide systems—**Integral V™ Technology (IVT)**. A unique, patent pending process allows for tighter tolerances without additional cost. The design itself is capable of carrying heavy loads at high capacity, velocity, and acceleration while still excelling in wear resistance. IV-T also has a growing number of configurations and a wide range of uses with custom orders available. This versatile product is yet another in a long line of innovative products in PBC's History.

With the 20 different configurations already available—and more being developed each week—the **IV technology** is truly versatile in its application. Products in **IV technology** include Snap-In, Bolt-On, Integrated and Compact configurations. All of which allow for easy installation, and what really sets this product and company apart from others is that Pacific Bearing is willing to work with companies to integrate the **IV-technology** into their extrusions. PBC's engineering team is fully prepared to adapt or modify the customer's base design with the new **Integral V technology** to ensure a successful product.

# News Release

The hardened steel V-raceway allows for a high load capacity, rigidity and wear resistance.

Our rail is constructed of light-weight aluminum partnered with hardened steel V raceways that are mechanically inserted to create high contact loads and wear resistance; thereby lowering production and replacement costs.

For more information on the new Integral V Technology, please call 1.800.729.9085 or email to [marketing@pacific-bearing.com](mailto:marketing@pacific-bearing.com).

- Leading Innovator in Linear Motion Since 1982
- Located in Roscoe, IL with 150,000 ft<sup>2</sup> Facility
- Easy to Use Website

- New Series of Linear Actuators
- Revolutionary new Integral V™ Technology
- Advanced Technical Assistance
